

MAHLE Industrialfiltration is now Filtration Group. For more information, visit www.fluid.filtrationgroup.com

Simplex filter ES46

Simplex filter, welded design, rated pressure up to 40 bar (580 psi) Connection sizes: DN 15 to DN 300, steel structure

1. Features

High-performance filters for modern systems

- Entry-level model among Filtration Group GmbH products
- Used as a protective or safety filter in shipping and industry
- Simple, robust design
- Compact design
- Minimal pressure drop through optimal flow design
- Elements with high differential pressure stability and dirt holding capacity
- Filter ratings from 25 to 5000 µm absolute, other ratings on request
- Suitable for use with fluids of all types
- Easy to service
- Worldwide distribution

2. Operating principle

3. Technical Data

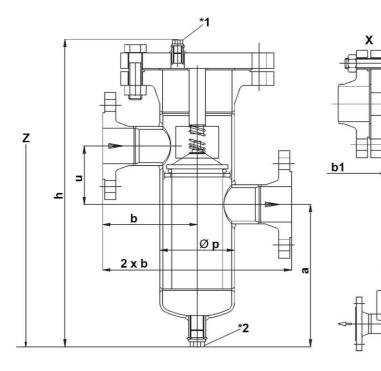

- The medium flows through the filter element (perforated, smooth or pleated) from the inside to the outside.
- Contaminants are trapped on the inside of the element.
- The filtration process is interrupted when a settable fouling threshold is reached.
- The filter is opened and the element removed for cleaning.
- Simplex filters require no maintenance apart from cleaning the filter elements and inspecting the seals.

| Connection: | DN 15 to DN 300 |
|-----------------------------|--------------------------|
| Flange up to DN 50: | DIN 2635 |
| Flange from DN 65: | DIN 2633 PN 33 (x = 3) |
| | DIN 2635 PN 40 (x = 5) |
| Flange DN 65 to DN 150: | DIN 2632 PN 10 (x = 3) |
| Thange Divise to Divise. | DIN 2634 PN 25 (x = 5) |
| Flange DN 200 to DN 300: | DIN 2632 PN 10 (x = 2) |
| | DIN 2634 PN 25 $(x = 4)$ |
| | |
| Material: | C-Steel/Stainless steel |
| Max. operating pressure: | 10-40 bar |
| Test overpressure up to | |
| DN 50: | 57.5 bar |
| Test overpressure from | |
| DN 65: | 14.5 - 57.5 bar |
| Max. operating temperature: | 120 °C |
| Filter element: | Screen basket, cartridge |
| Filter rating: | 25 to 5000 µm absolute, |
| | other ratings on request |

All dimensions except "s" and "t" in mm.

x = Index for pressure stage

y = Index for flange position

* Type with counter-flange see Detail "X" (page 2), blind-flange DIN 2527 PN 40 with bore according to DIN 2576.

5. Design and application

A wide range of filter elements are available for every filter. The material, type of construction and filter surface and rating are expertly adapted to the specific filtration task based on the medium and capacity.

Each filter can be supplied with various options to ensure the optimum performance for each particular application.

Options:

- Heating cartridge steam/thermal oil or electric
- Heating jacket steam/thermal oil
- Magnetic elements
- Differential pressure indicator/switch as a assembled part
- Internal coating or rubber coating

Simplex filters are not at all complicated to use. The necessary steps are described in the following:

- The filter comprises a cylindrical housing, a cover and a filter element. It is fitted with a vent screw and a drain plug.
- Stress relief must be provided for all pipe connections. The filter must be filled and vented before it is put into service. Install the filter piping so that the medium flows through the filter in the direction indicated by the arrow.
- During the filtration process, the medium flows through the filter element from the inside to the outside. Contaminants are trapped on the inside of the element. As the filter element becomes increasingly dirty, the flow resistance rises accordingly. The degree of fouling is indicated on the differential pressure gauge (optional). The filter element must be cleaned when the pressure difference reaches 0.7 bar.
- In order to remove the filter element, loosen the cover fastening nuts on the depressurised filter and lift off the cover. The dirty element can then be withdrawn without any problems.
- To clean the filter element, either blow it out with compressed air, steam or water or brush it with a soft brush. Be careful not to damage the filter fabric or the perforated sheet and avoid pushing the element inwards as it is blown out. Pre-treat the element with a suitable solvent if the dirt deposits cannot be removed easily.
